

AUTOMOTIVE COATING THICKNESS GAUGE

This handheld electronic gauge quickly measures automotive coating thickness on both ferrous and non-ferrous metals with exact precision. Each measurement is recorded and transmitted wirelessly to a mobile application where it is stored and interpreted for future analysis.

All measurements can be reviewed from within the free application, where users can generate statements or reports, and send emails to clients seconds after inspection. Work can continue without interruption.

Hold down the power button for 3 seconds until the light turns red

Correct setup will be signaled when both lights are on. You can start taking measurements!

Wait for the gauge to connect to your mobile device, turning the light blue

Avenon Technology is the exclusive representative for the American and Canadian market

OUR GAUGE

- Reads measurements along suggested measurement points on an auto body sketch
- Wireless Bluetooth communication
- Generates instant reports and statements
- Directly exports data to email from the app
- Private labeling options for the gauge and app
- Multilingual menu
- Designed and manufactured within the EU
- Warranty

2 Years
